---

PROFESSIONAL SUMMARY: Data and analytics engineer with 3+ years of hands-on Python and SQL experience building data models, ETL pipelines, and automated reporting across enterprise data warehouses in banking, healthcare, and technology environments. Actively expanding into cloud infrastructure and CI/CD, with working experience in Terraform, Ansible, and AWS (EC2, IAM, RDS). Comfortable learning unfamiliar business domains quickly, writing testable code, and handling sensitive data with care. Seeking to apply data engineering fundamentals to governed, production-grade data products.

SKILLS:

- **Languages:** Python, SQL
- **Data Engineering:** ETL/ELT pipeline design, data ingestion, data transformation, data modeling, data warehousing, materialized views, dbt, Apache Airflow, Spark
- **Databases and Warehouses:** Snowflake, Amazon Redshift, Google BigQuery, PostgreSQL, MySQL, AWS RDS
- **Cloud (AWS):** S3, AWS Glue, Athena, Lambda, EC2, IAM, RDS, CloudWatch
- **APIs and AI Data Services:** FastAPI, Pydantic, Model Context Protocol (MCP), REST APIs
- **Testing and Data Quality:** pytest, data validation, data reconciliation, automated monitoring
- **Observability:** Datadog dashboards, CloudWatch, log analysis
- **CI/CD and Version Control:** Git, GitHub, Bitbucket, Jenkins, CI/CD pipelines
- **Infrastructure as Code:** Terraform, Ansible, Nginx
- **BI and Collaboration:** Power BI, Tableau, Advanced Excel, Jira, Confluence

---

WORK EXPERIENCE

Riddell / Simbex - Analytics Engineer **Lebanon, NH (Remote) | December 2023 - Present**

- Query enterprise data warehouses daily using SQL to build and maintain dashboards and reports for 5,000+ stakeholders across banking and clinical business units.
- Develop data models and materialized views in Snowflake SQL, reducing data refresh latency by 45% and enabling near real time reporting with sub second query response times.
- Built 30+ standardized, reusable reporting modules with consistent metric definitions, cutting ad hoc reporting requests by 40%.
- Implemented automated data quality monitoring that reduced reporting errors by 30% quarter over quarter, working as liaison between business stakeholders and technical teams.
- Consolidated 12+ enterprise dashboards into centralized, role-based access reporting, cutting compliance escalations by 40%.
- Reviewed and contributed to infrastructure pull requests covering Nginx routing and security hardening, Ansible playbook refactoring, and automated release cleanup tooling across nonproduction AWS environments.
- Set up an isolated Terraform and Ansible test environment to practice infrastructure provisioning and configuration management, following plan before applying and scoped execution safety practices.
- Gaining hands on exposure to EC2 provisioning via Terraform, AWS IAM and RDS, and CI/CD pipelines in Jenkins supporting Node.js based API architecture.

- Applied prior monitoring experience with Datadog dashboards and log analysis to infrastructure observability and reliability work.

Vision Quest Solutions - Data Analyst **Bangalore, India | April 2021 - December 2021**

- Built automated monitoring dashboards surfacing real time system health metrics and compliance KPIs for 200+ internal stakeholders, reducing manual reconciliation time by 35%.
- Developed automated reporting workflows aggregating data from 5+ enterprise sources into a centralized reporting hub using SQL, Python, and Power BI.
- Optimized data processing pipelines through SQL query tuning, achieving sub 200ms dashboard refresh latency for 200+ daily users.
- Reduced analytical reporting turnaround time by 25% by building reusable SQL templates for root cause investigations.
- Designed dimensional data models (star schema with fact and dimension tables) to support reporting, defining primary and foreign keys and data types across source systems.
- *I*mplemented data quality and validation checks in Python and SQL (null checks, duplicate detection, row-count reconciliation) to ensure accuracy of curated datasets before reporting.
- Translated business requirements and source-to-target mappings into tested transformation logic, working with business stakeholders to clarify definitions and exceptions.
- Maintained data dictionaries and documentation for curated datasets, and managed SQL and Python code in Git version control.

PROJECTS:

Production API Monitoring Dashboard (Datadog): Designed a three-tier dashboard covering system wide, per endpoint, and per team views to surface anomalies in API call volume, response time, and error rate for a fleet of field devices.

NXT Log Analysis Tool (Python and PostgreSQL): Built an end-to-end pipeline to pull, decode, and analyze binary log data at scale, including batching for large data sets and automatic retry handling for unreliable connections.

Binary Log Data Pipeline (Python, PostgreSQL): Built a scalable ingestion and transformation pipeline to pull, decode, and load binary device log data into PostgreSQL, with batching for large datasets and automatic retry and error handling.

Production API Monitoring Dashboard: Designed a 3-tier observability dashboard (system-wide, per-endpoint, per-team) to detect anomalies in API call volume, response time, and error rate across a fleet of field devices.

EDUCATION

New Jersey Institute of Technology - Master of Science, Information Systems

Gudlavalleru Engineering College - Bachelor of Technology, Computer Science
